The Arizona Corporation Commission
1200 W Washington St.
Phoenix, AZ 85007

Dear Chairman Burns:

I am writing to you on behalf of the Alliance for Industrial Efficiency (the “Alliance”) to thank you for your recent vote to approve draft interconnection rules for Arizona. This vote will help make it easier for Arizona businesses to install distributed technologies like combined heat and power (CHP). The rules will also get rid of the patchwork of requirements and procedures that developers face across the state. This will only help to make clean energy cheaper and easier to access.

The Alliance believes that clear, standardized interconnection procedures are crucial to facilitating CHP and other distributed generation resources in Arizona. We are grateful that the Commission is undertaking steps to adopt such standards for Arizona and appreciate your consideration of our input on this process.

We look forward to working with you and the Commission Staff on next steps.

Sincerely,

David Gardiner
Executive Director
Alliance for Industrial Efficiency

The Alliance is a diverse coalition of business, labor, and non-profit organizations that advocate for policies that increase U.S. manufacturing competitiveness through industrial energy efficiency, especially the use of CHP and WHP.
